While the most widely used type of method for circulating SPAM is Email through which unwanted emails, more number of spam emails, reverse NDR attacks etc.. But we need to always ensure that we are aware of all the settings configured in the spam filtering in all levels in our organization as it can interrupt the end users in sending and receiving emails if this configuration is not correct.. Microsoft has built in Anti spam features which can be enabled from Exchange 2003 versions and they work perfectly fine and more accurate in filtering the spam emails. The only thing i noticed was it required install the Microsoft Visual C++ Run-time which it prompted for it and it found the software by its own and installed them which made my job simple.. The installation was pretty much standard as all the software does and it prompted me for the latest virus definition updates so i would not walk through the entire setup.
